Mini Project Report
On
ADOPETS

Submitted By

Name: Manish Godbole
Roll No. 31226 Class: TE 02

Name: Kaustubh Joshi
Roll No. 31233 Class: TE 02

Under the guidance of
Prof. V. S. Gaikwad

DEPARTMENT OF COMPUTER ENGINEERING
Academic Year 2023-2024

CERTIFICATE

This is to certify that the Mini Project Report entitled

“ADOPETS”

has been successfully completed by

Manish Manoj Godbole(31226)
Kaustubh Narendra Joshi (31233)

Is a bona fide work carried out by them under the supervision of Prof. V. S. Gaikwad and it is approved for the partial fulfillment of the requirements for the Web Technology Laboratory subject of T.E. Computer Engineering – 2019 course of the Savitribai Phule Pune University, Pune.

Prof. Geetanjali Kale
HOD, Computer Engineering

Place: Pune
Date: 18/04/2024

ACKNOWLEDGEMENT

We are fortunate to have received this support during the completion of our project because the success and conclusion of our project required a lot of direction and assistance from many individuals. We would want to use this opportunity to express our gratitude for the guidance and support in everything we have accomplished. We over debt of appreciation to Prof. V. S. Gaikwad, our project advisor, who showed a genuine interest in us and helped us through the entire process of giving us all the information we needed. A special thank you to Prof. Geetanjali Kale, our HOD.

Title: ADOPETS

Problem Definition:

To address the challenge of efficiently connecting pets up for adoption with potential adopters in an accessible and user-friendly manner.

Learning Objectives:

1. To enhance proficiency in front-end web development using HTML, CSS, and JavaScript to create an intuitive user interface.
2. To gain proficiency in integrating Firebase User Authentication for secure user sign-up and sign-in processes.
3. To develop skills in utilizing Firebase Firestore database for efficient storage and retrieval of pet adoption data.
4. To learn to implement features such as adding new pets, selecting pets for adoption, and implementing logout functionality within a web application.
5. To understand best practices for designing and implementing user authentication and database functionalities to ensure data security and reliability.

Learning Outcomes:

1. Enhance proficiency in front-end web development using HTML, CSS, and JavaScript to create an intuitive user interface.
2. Gain proficiency in integrating Firebase User Authentication for secure user sign-up and sign-in processes.
3. Develop skills in utilizing Firebase Firestore database for efficient storage and retrieval of pet adoption data.
4. Learn to implement features such as adding new pets, selecting pets for adoption, and implementing logout functionality within a web application.
5. Understand best practices for designing and implementing user authentication and database functionalities to ensure data security and reliability.

Abstract:

In our project, ADOPETS, we embarked on a mission to reimagine the pet adoption experience through a user-centric web application. Central to our endeavor was the seamless integration of Firebase User Authentication, ensuring the privacy and security of our users' data during sign-up and sign-in processes. Complementing this, the utilization of Firebase Firestore database empowered us to efficiently manage and present pet adoption listings, optimizing performance and scalability.

Our technical journey extended to front-end development, where HTML, CSS, and JavaScript served as our creative tools to sculpt an intuitive and visually captivating user interface. Through meticulous design and implementation, we introduced key features such as pet addition, selection for adoption, and user logout functionality, enriching the overall user experience.

ADOPETS isn't just a platform; it's a conduit for meaningful connections between pets in need and compassionate individuals seeking companionship. With every line of code, we endeavored to blend technological innovation with empathy, fostering an ecosystem where pets find loving homes and users find fulfillment. This abstract encapsulates our commitment to technical excellence and user empowerment, illustrating how ADOPETS transcends digital boundaries to enrich lives.

Modules:

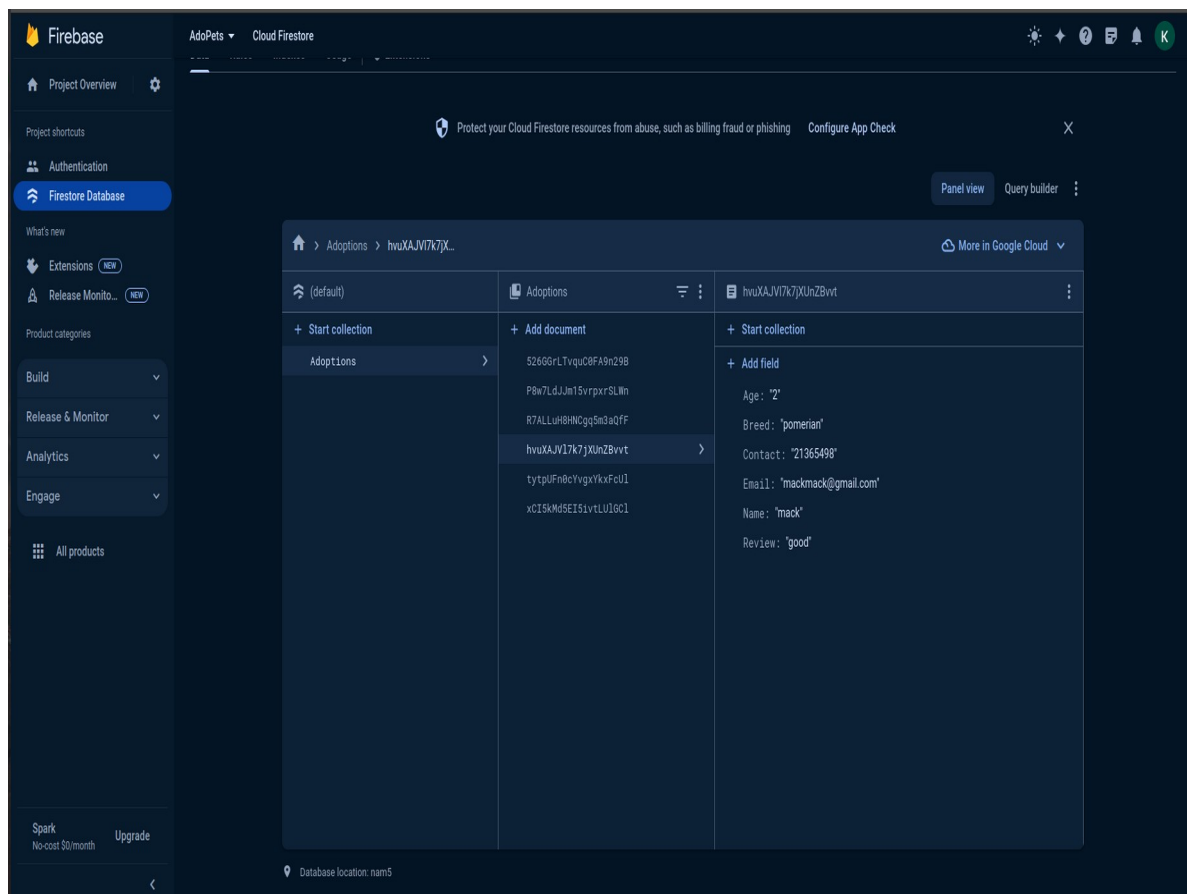

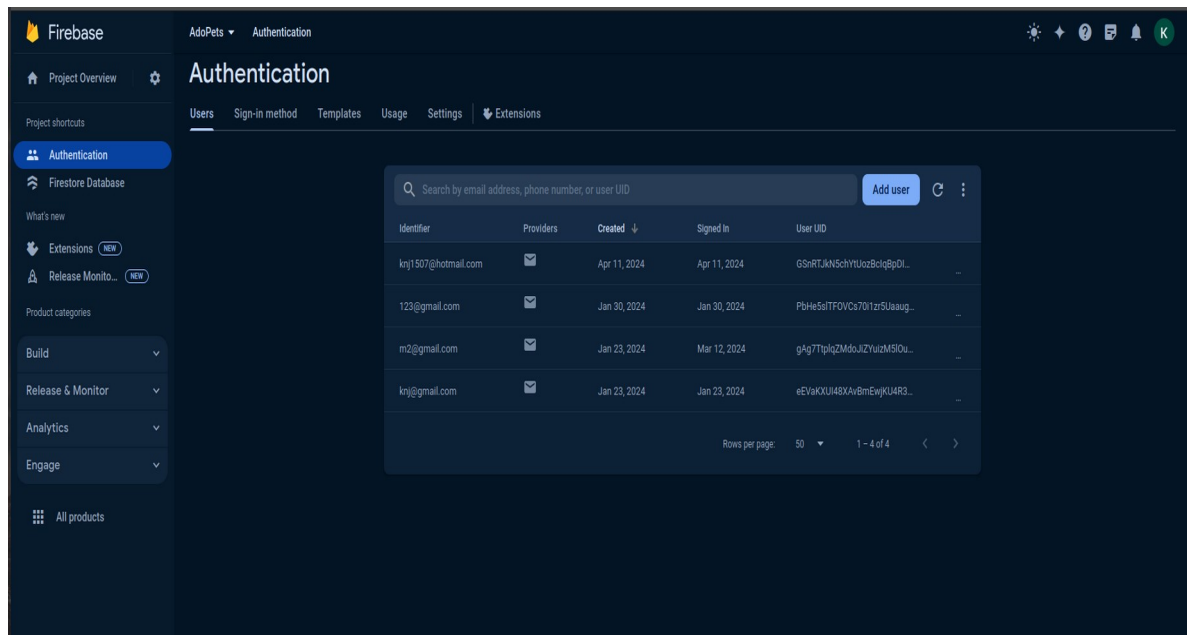

Sign Up / Sign In Module: This module is responsible for creating a new user or logging in as an old user.

Add Pet Module: This module handles adding of new pets up for adoption to the database with certain details about the pet and the owner for security.

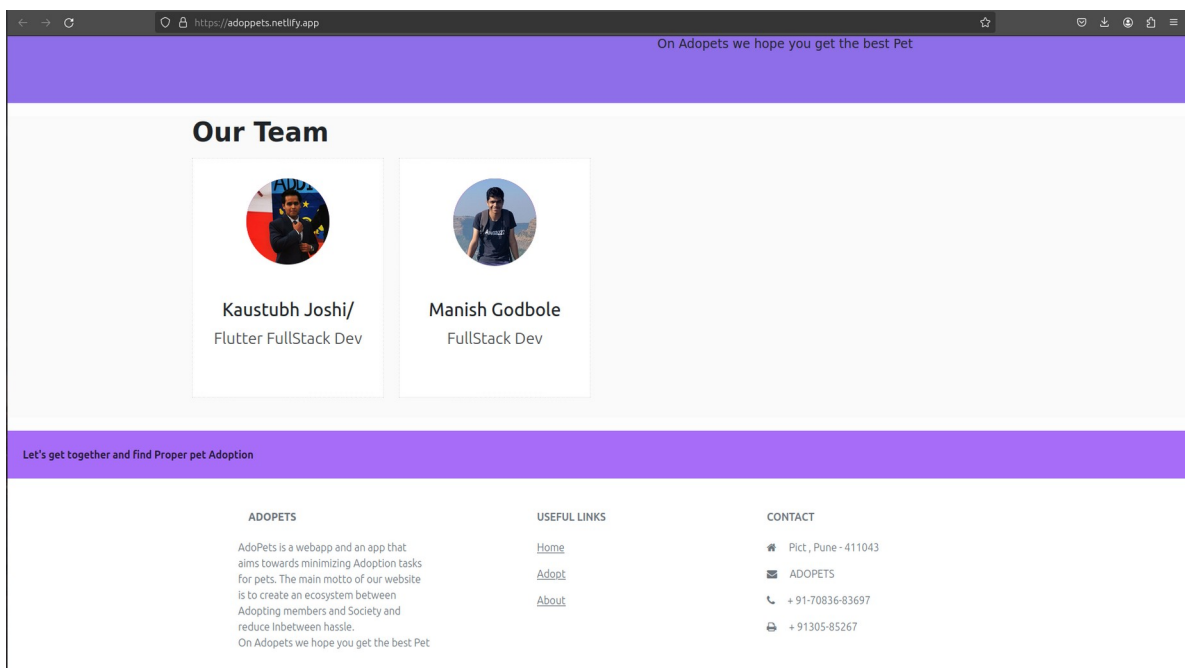

Adopt Pet Module: This module displays the available pets up for adoption and allows users to read available information to initiate the adoption process.

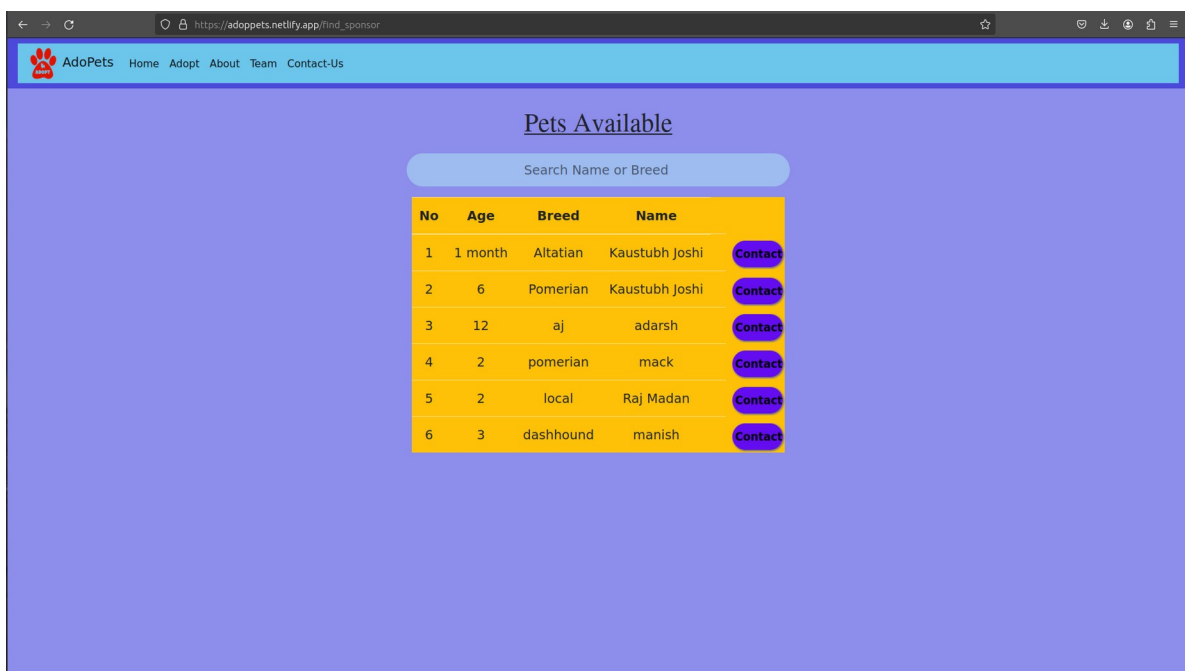

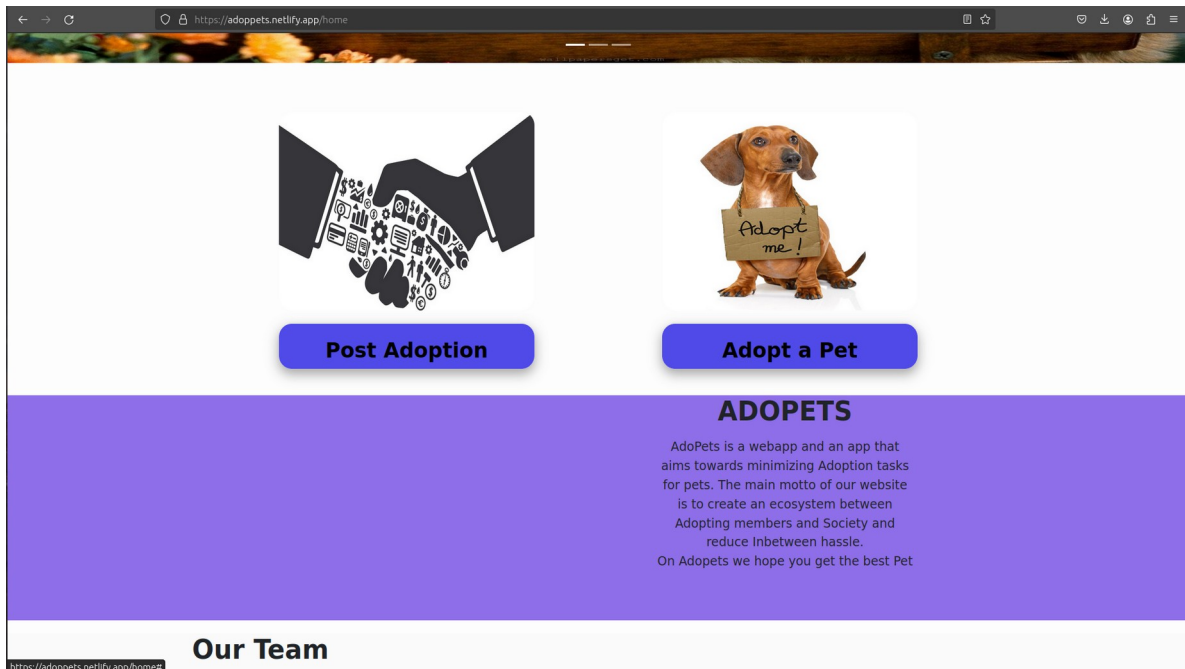

Logout Module: Allows user logout

Database Schema:

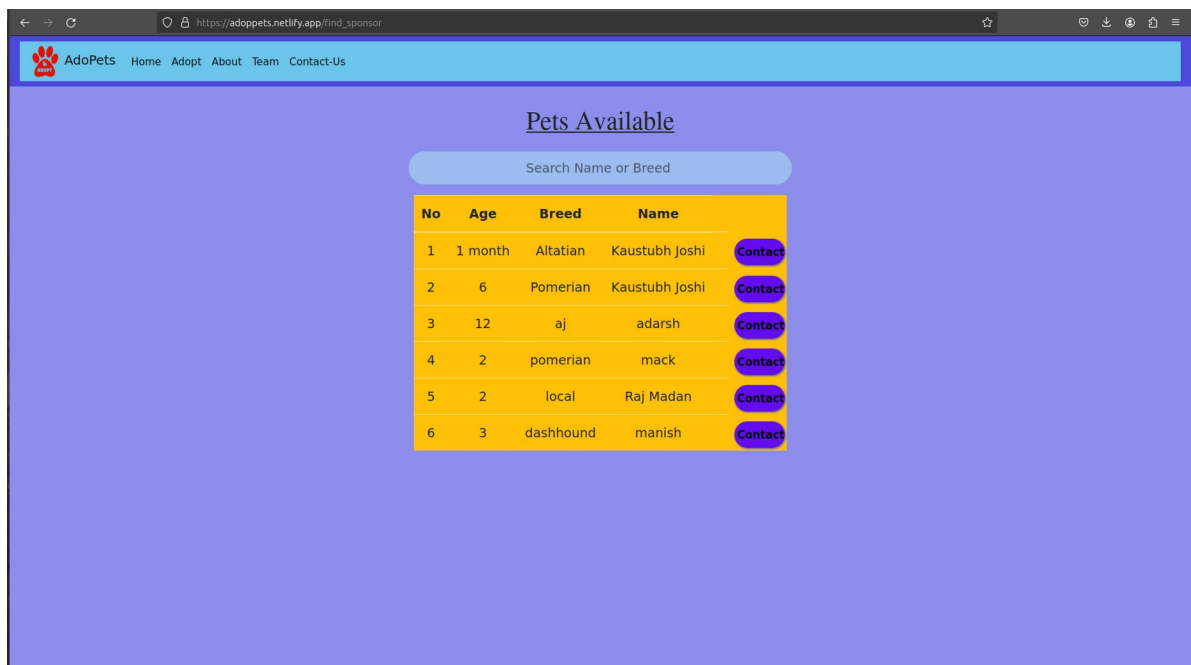

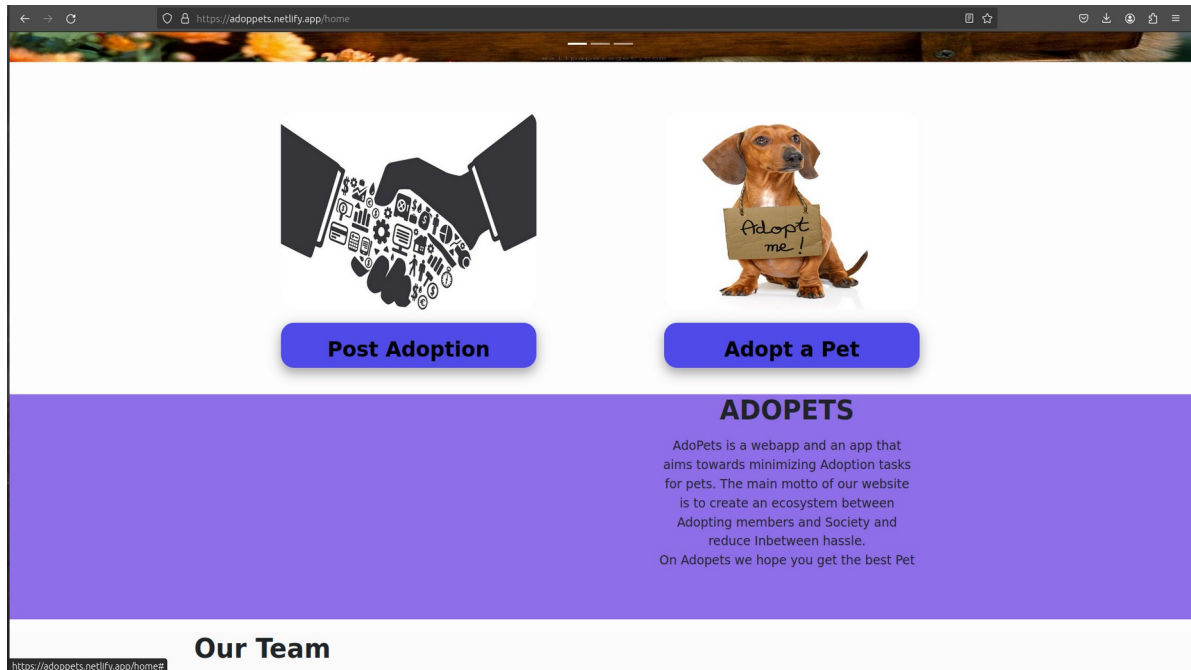

Output Screenshots:

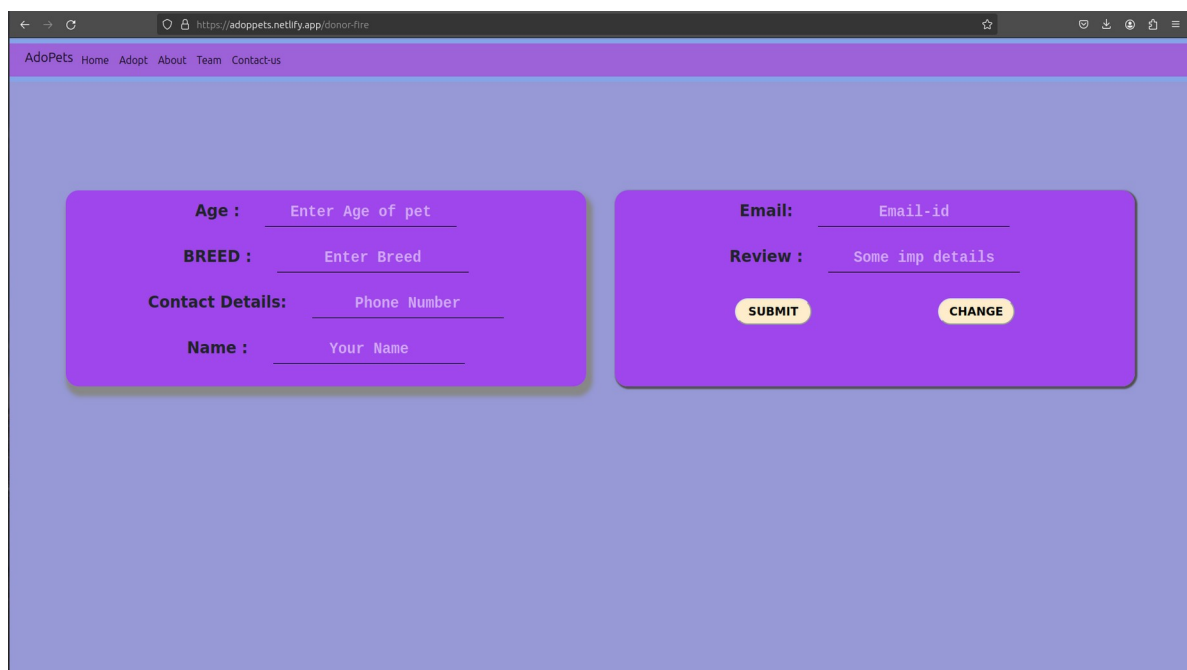

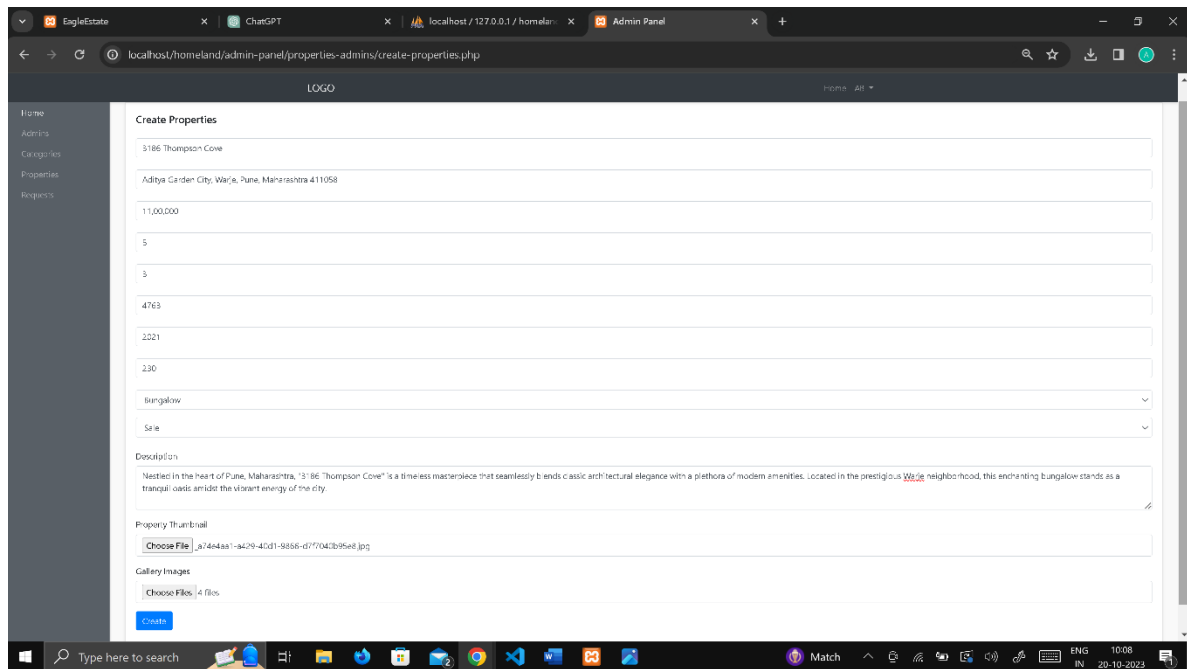

TEST CASES:

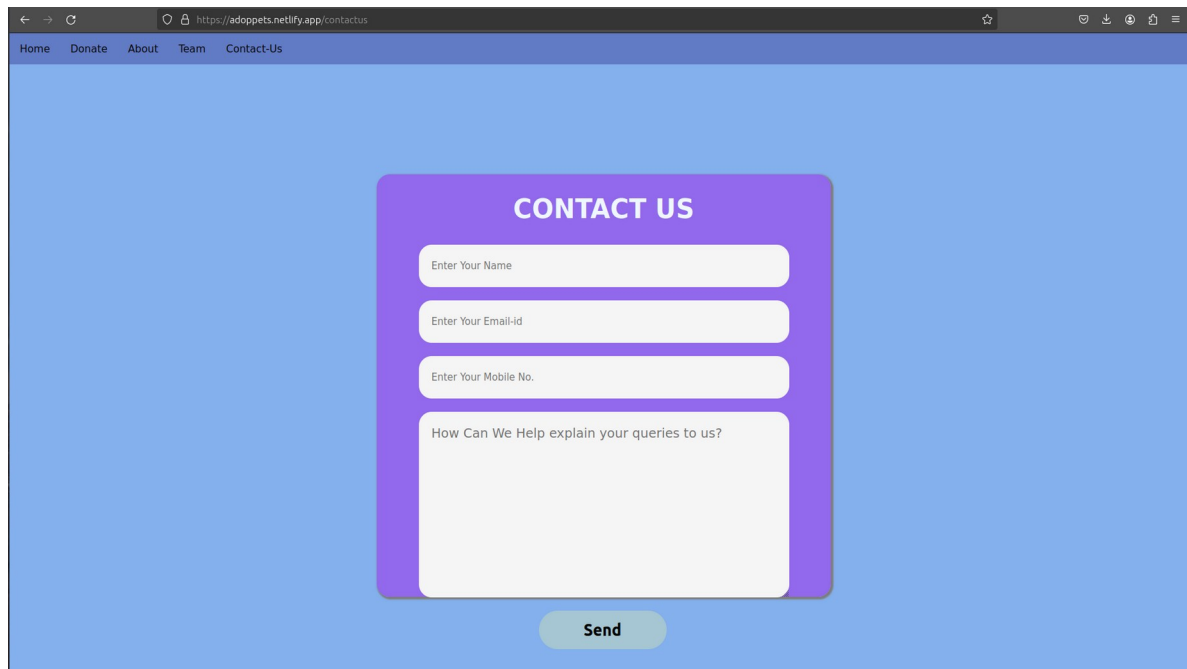

A. Adoption

B. Add a Pet

C. Contact Us

The screenshot shows a web browser window with the URL <https://adoppets.netlify.app/contactus>. The browser's address bar and navigation icons are visible at the top. Below the address bar is a dark blue navigation bar with links: Home, Donate, About, Team, and Contact-Us. The main content area has a light blue background. In the center is a purple rounded rectangle containing the 'CONTACT US' form. The form has a title 'CONTACT US' in white. It includes four input fields: 'Enter Your Name', 'Enter Your Email-id', 'Enter Your Mobile No.', and a larger text area for 'How Can We Help explain your queries to us?'. A green 'Send' button is located at the bottom of the form.

CONCLUSION:

In conclusion, ADOPETS represents the convergence of technological innovation and compassion, offering a seamless platform for pet adoption. Through our project, we've demonstrated how thoughtful design and technical proficiency can create meaningful connections, enriching the lives of both pets and their adoptive families.
